I am writing to apply for the Senior Software Engineer Full Stack position at Code Gaia. The opportunity to work on sustainability compliance software and integrate AI features into a web application aligns well with my background in full-stack development and AI engineering.

My professional experience includes building full-stack web applications with TypeScript, React, Next.js, and Node.js, and deploying them on AWS. I have worked extensively with REST APIs, relational databases like MySQL and PostgreSQL, and have implemented authentication, role-based access control, and real-time features. I am comfortable working across the entire stack and taking ownership of features from design through deployment.

One area that particularly interests me is the integration of AI into web applications. In previous projects, I have worked with OpenAI APIs and built AI-powered assistants and image processing features into production systems. I am familiar with the practical challenges of deploying AI features alongside traditional web functionality, which directly relates to Code Gaia's roadmap for adding AI support throughout the app.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and welcome the opportunity to discuss how my skills can contribute to Code Gaia's mission.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
