I am writing to apply for the Staff AI Backend Engineer position at paretos GmbH. Your focus on building a Decision Intelligence platform with agentic workflows, semantic data layers, and AI-first engineering aligns with the kind of systems I enjoy building.

Through hands-on project development, I have built production-grade backend services that integrate AI models, real-time data pipelines, and cloud infrastructure. I designed and developed the backend for an AI-powered financial application using Express, TypeScript, OpenAI, and AWS. The system included AI assistants trained on custom datasets, voice-to-text processing via AWS Transcribe, PDF generation, and secure authentication with OTP, Google, and Facebook login. This required clean API design, database modeling with MongoDB, and deployment on AWS EC2 with Nginx.

I have worked extensively with PostgreSQL, Redis, Docker, and CI/CD pipelines. In my professional experience as a Web Developer, I built scalable RESTful APIs, implemented role-based access control, optimized database queries, and deployed applications on Linux servers. I also developed a real-time server health monitoring dashboard using Node.js, Socket.IO, and Docker, which streams live system metrics to the browser.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to paretos.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
