I am writing to apply for the Werkstudent Anwendungsentwicklung & Digitalisierung position at Andres Industries AG. Your work in developing high-quality thermal imaging systems for security-critical applications is impressive, and I am interested in contributing to the digitalization of your internal business and production processes.

Through my professional experience as a Web Developer, I have built and maintained web applications using JavaScript, TypeScript, and Laravel. I have worked extensively with REST APIs, MySQL, and PostgreSQL databases, designing schemas and optimizing queries for performance. I also have hands-on experience with Docker for containerized deployments and Linux server management, which aligns with your preferred qualifications.

One area that particularly interests me is the integration of ERP systems and data sources via APIs. In previous work, I developed a full-stack real-time server monitoring dashboard using React, Node.js, Socket.IO, and Docker. This project involved building API endpoints, streaming live data to the browser, and managing database connections. I also worked on a multi-vendor e-commerce platform where I implemented role-based access control, payment integration, and database optimization using Laravel and MySQL.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am currently enrolled in a Bachelor of Software Engineering program, which keeps me engaged with structured problem-solving and continuous learning. I would welcome the opportunity to support your team in developing internal software solutions and driving digitalization projects forward. I have attached my CV for your review.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
