I am writing to apply for the Fullstack-Engineer (Web / Mobile / Backend) position at Cap3 GmbH. Your team's approach to building custom software solutions across web, mobile, and backend layers, with an emphasis on understanding the full system rather than isolated components, aligns directly with how I work.

In my professional experience as a full-stack developer, I have built and shipped web applications using React, TypeScript, Next.js, and Laravel. I have designed RESTful and GraphQL APIs, structured frontend architectures with clean data flows, and worked with PostgreSQL for data-driven systems. I approach development with a system-level mindset, considering how frontend, backend, and APIs interact to deliver reliable products.

One area that particularly interests me is building mobile applications. I have experience with React Native and Flutter, and I am comfortable working across platforms. I have integrated real-time features using WebSockets and Socket.IO, implemented role-based access control, and deployed containerized applications with Docker and Nginx. I also have experience with monitoring tools like Prometheus and Grafana, which I see your team uses.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my full-stack experience and system-level thinking can contribute to your projects in Kiel.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
