I am writing to apply for the Freelancer / Working Student position in PLM Migration & Configuration at eigenblue GmbH. Your work on building systems that design and deliver custom physical solutions is genuinely interesting, and I appreciate the multidisciplinary approach that unites software, hardware, and applied physics.

My technical background is in software engineering, with hands-on experience handling structured data, configuration files, and system migrations. I have worked with YAML-based configurations, database migrations, and API integrations across multiple projects. This experience translates well to the PLM environment, where precision and structured data management are essential.

Through my professional experience, I have supported data migration efforts between systems, ensuring data integrity and accuracy throughout the process. I have also created templates for workflows and documented configurations clearly, making processes repeatable and transparent for team members. These skills directly apply to the tasks of reviewing BOMs, migrating data between PLM systems, and configuring Duro as a new platform.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to your team at eigenblue GmbH.

Sincerely,

Md Shahanur Islam Shagor
