I am writing to apply for the Leiter Cashmanagement & Liquiditˆtssteuerung & Finanzen position at Fischer & Partner Gesellschaft fˆ…r Personal mbH, as advertised through your agency. While my professional background is in software engineering rather than traditional finance, I bring strong analytical capabilities, system design experience, and a track record of building secure, data-driven platforms that manage complex financial workflows.

My technical expertise lies in full-stack development, with particular strength in Laravel, Next.js, React, and Node.js. I have designed and deployed applications that handle sensitive financial data, user authentication, payment gateway integration, and real-time data processing. These systems required careful attention to data integrity, security, and reliability, which I understand are equally important in cash management and liquidity control.

One relevant example is an AI-powered financial application I developed, which processes transactions, integrates with AWS services for secure data handling, generates PDF term sheets, and manages user authentication through OTP, Google, and Facebook. Building this system required me to think carefully about data flow, error handling, and system reliability, skills that translate directly to managing payment flows and financial operations.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in building reliable, secure systems could contribute to the financial operations of your client’s organization.

Sincerely,

Md Shahanur Islam Shagor
