I am writing to apply for the IT-Systemadministrator position at Nord-Ostsee Automobile. Your role in maintaining reliable, secure, and future-ready IT systems for a leading automotive group is exactly the kind of infrastructure challenge I want to contribute to.

Through my professional experience, I have developed strong skills in Linux server administration, Docker containerization, and web server management with Nginx and Apache. I have worked extensively with CI/CD pipelines, automated deployment workflows, and system monitoring tools. This technical foundation allows me to effectively support and optimize complex IT environments.

One area that particularly interests me is process automation and system optimization. In my previous work, I deployed and maintained applications on Linux servers, configured Nginx and Apache for production workloads, and used Docker to containerize services for consistency and scalability. I also implemented monitoring solutions to track system health and performance proactively.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my skills can contribute to your IT team.

Sincerely,

Md Shahanur Islam Shagor
