I am writing to apply for the Kerendia Task Force position at Bayer. Your mission to solve global challenges in health and food security is something I find genuinely meaningful, and I would welcome the opportunity to contribute to your team in Valsad.

My background is in full-stack software engineering, with four years of professional experience building and deploying production web applications. I have worked extensively with Laravel, Next.js, Node.js, and MySQL, designing scalable backend architectures and responsive frontend interfaces. I focus on writing clean, maintainable code and delivering systems that work reliably under real-world conditions.

In my previous role at Explo-IT, I developed RESTful APIs, implemented role-based authentication and secure payment gateways, and optimized database performance through query tuning and caching strategies. I also built real-time features such as chat and live notifications using WebSockets. On the deployment side, I have worked with Linux servers, Docker, Nginx, and CI/CD pipelines to ensure smooth and stable releases.

One project that reflects my approach is a multi-vendor e-commerce ecosystem built with Laravel and Flutter, which involved role-based access control, Redis caching, Firebase notifications, and Cloudflare CDN integration. The system coordinated customers, sellers, and delivery agents through a unified backend, demonstrating my ability to handle complex business logic and cross-platform communication.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. Thank you for considering my application.

Sincerely,

Md Shahanur Islam Shagor
