I am writing to apply for the hh2 position at Biztech. The construction management platform Civalgo, with its focus on real-time project planning, resource allocation, and team collaboration, represents the kind of practical, impact-driven product I enjoy building.

My professional background is in full-stack web development, with over four years of experience building and maintaining production applications. I have worked extensively with Laravel for backend development and Next.js with React for frontend interfaces. I have built RESTful APIs, implemented authentication and role-based access control, integrated payment gateways, and delivered real-time features using WebSockets. I am also comfortable deploying applications on Linux servers with Docker, Nginx, and CI/CD pipelines.

One area that particularly interests me is building systems that handle complex workflows while remaining intuitive for users. In my previous role at Explo-IT, I worked on scalable web applications where I optimized database queries, integrated third-party services, and delivered responsive, SEO-friendly UIs. I also built a multi-vendor e-commerce platform with Laravel and Flutter that coordinated customers, sellers, and delivery agents through role-based dashboards and real-time notifications.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my experience aligns with the needs of the hh2 team at Biztech.

Sincerely,

Md Shahanur Islam Shagor
