I am writing to apply for the System Software Engineer position at Hewlett Packard Enterprise. HPE's work in edge-to-cloud infrastructure and data-driven systems is directly relevant to the kind of engineering challenges I enjoy solving.

My engineering background combines systems-level software development with full-stack delivery. I have worked with Linux and Windows environments, built and integrated REST APIs, and developed web interfaces using HTML5 and modern JavaScript frameworks. I apply object-oriented design principles and follow secure coding practices in every system I build.

In previous roles, I coded and debugged software subsystems, executed test plans, and collaborated with internal and outsourced development partners. I have experience with SQL databases, version control using Git, and containerized deployments with Docker. I am comfortable working in Agile/SCRUM teams and contributing to reliable, cost-effective solutions.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my skills can contribute to HPE's engineering team.

Sincerely,

Md Shahanur Islam Shagor
