I am writing to apply for the Senior Product Manager position at Lemon.io. Your marketplace model connecting skilled professionals with US and European startups aligns well with how I prefer to work: delivering tangible results through direct client collaboration and clear communication.

Through my professional experience as a full-stack developer, I have built and launched multiple products from scratch. I understand the full product lifecycle, from requirement gathering and system design to deployment and iteration. This technical foundation allows me to communicate effectively with engineering teams, make informed prioritization decisions, and bridge the gap between business goals and technical execution.

A relevant example is my work at Explo-IT, where I collaborated directly with stakeholders and engineering teammates to design scalable web applications using Laravel and Next.js. I was responsible for defining technical approaches, building RESTful APIs, implementing authentication and payment systems, and ensuring reliable deployments. This experience taught me how to balance feature requests against technical constraints while keeping delivery timelines realistic.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my product and technical experience could contribute to Lemon.io and its clients.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
