I am writing to apply for the Senior Product Designer role at Flix, specifically for the FlixTrain Operations Management Platform. The opportunity to build a greenfield suite of mission-critical tools for railway operations is compelling, and I am drawn to the challenge of designing complex, data-dense software that must be both efficient and humane for its expert users.

My professional experience as a full-stack developer has given me a strong foundation in building web applications where user experience and interface clarity are paramount. I have worked on projects that required translating operational workflows into intuitive interfaces, ensuring that complex data is presented in a way that is clear and actionable for end-users. I am proficient in Figma for creating wireframes, interactive prototypes, and high-fidelity designs, and I understand the importance of maintaining a consistent design system across a platform.

A relevant example is my work on a multi-vendor e-commerce management ecosystem. This project involved designing interfaces for multiple user rolesâ customers, sellers, and delivery agentsâ each with distinct operational needs. I focused on creating a cohesive user experience across web and mobile platforms, collaborating with engineering and product stakeholders to align on design goals and ensure the workflows were efficient and learnable. This experience directly applies to designing for dispatchers, fleet managers, and operations teams with varying responsibilities.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. Thank you for considering my application.

Sincerely,

Md Shahanur Islam Shagor
