I am writing to apply for the Senior Backend Engineer - Golang position at SumUp. The Merchant Intelligence squad's mission to build a shared source of truth for product and merchant data across the business is a compelling challenge. SumUp's focus on empowering small businesses globally through reliable financial tools makes this role particularly interesting to me.

My backend engineering experience centers on building scalable services with Go, PostgreSQL, and Docker. I have designed and maintained robust APIs and data models, and I am comfortable working with AWS, Kubernetes, and event-driven patterns. This technical foundation aligns well with the squad's need to create foundational services that are reliable, scalable, and easy for internal teams to adopt.

In previous work, I built a real-time server health monitoring dashboard using Node.js, Express, Socket.IO, and Docker. This involved designing data ingestion pipelines, implementing JWT-based authentication, and deploying the full stack with Docker Compose and Nginx. I also developed a multi-vendor e-commerce platform with Laravel and Flutter, where I focused on role-based access control, API design, and database optimization with MySQL and Redis.

One area that particularly interests me is building data aggregation and event-processing pipelines that turn fragmented signals into actionable intelligence. I have experience working with relational databases, message-driven architectures, and observability tools like Prometheus and Grafana. I am comfortable navigating ambiguity and contributing to long-term architecture decisions in a newly formed squad.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments. I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to SumUp's Merchant Intelligence squad.

Sincerely,

Md Shahanur Islam Shagor
