I am writing to apply for the Senior Full Stack Developer role at Accurids GmbH. Your work on building the data backbone for life-science innovation, standardizing critical enterprise data in compliance with ISO IDMP, is an area where I see strong alignment with my own experience in full-stack development and AI-augmented workflows.

Through my professional experience as a Web Developer, I have delivered features across the full stack using React, TypeScript, and Next.js on the frontend, alongside Node.js, Express, and PostgreSQL on the backend. I have built responsive UI components, managed application state, and integrated GraphQL and REST APIs to connect frontend and backend systems seamlessly. I also have hands-on experience with Material UI and testing tools like Jest, which directly supports the frontend engineering and quality assurance responsibilities outlined in your description.

One area that particularly interests me is your emphasis on AI-driven velocity and agentic workflows. In my recent projects, I have integrated AI APIs and built intelligent assistants using OpenAI and Replicate, and I am comfortable working with modern AI coding tools to accelerate development. I also have experience deploying applications with Docker, Nginx, and CI/CD pipelines on Linux servers, which aligns with your DevOps and deployment needs.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background can contribute to the Accurids team.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
