I am writing to apply for the Testmanager Software und Systemtests position at MY Humancapital GmbH in Munich. The role's focus on planning, monitoring, and continuously improving test strategies for complex software systems aligns with my engineering background and my interest in delivering high-quality, reliable products.

Through my professional experience in software development, I have developed a structured approach to testing that goes beyond simple bug detection. I have planned and coordinated test activities across multiple projects, created test specifications, and evaluated results to ensure product quality. My work has involved analyzing test coverage, tracking defect patterns, and following up on corrective measures to continuously refine testing strategies.

A relevant example is my work on the Real-Time Server Health Monitoring system, where I built a full-stack dashboard that tracks availability, latency, and performance of multiple target URLs in real time. This project required careful planning of test scenarios, coordination between frontend and backend components, and systematic evaluation of system behavior under different conditions. It reinforced my ability to manage testing activities across distributed systems and deliver clear, actionable reports.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my experience in software testing and quality assurance can contribute to your team.

Sincerely,

Md Shahanur Islam Shagor
