I am writing to apply for the Leakage Inspector position at Williams Tucker Limited. The role requires attention to detail, systematic inspection capabilities, and the ability to work across multiple locations, which aligns with my technical background in building monitoring and detection systems.

Through my work as a software engineer, I have developed strong analytical and problem-solving skills that are directly applicable to inspection work. I built a real-time server health monitoring dashboard that tracks system availability, latency, and performance across multiple targets simultaneously. This project required me to design systematic checking procedures, identify anomalies, and ensure reliable operation, which mirrors the core responsibilities of a leakage inspector.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am based in London and available to work across multiple areas as required. I am comfortable with field-based work and committed to performing thorough, reliable inspections.

I have attached my CV for your review and would welcome the opportunity to discuss how my background can contribute to your team.

Sincerely,

Md Shahanur Islam Shagor
