I am writing to apply for the Line inspector position at Job Buzzer. The role aligns with my background in building real-time monitoring systems and inspection tools that combine software engineering with practical hardware integration.

Through hands-on project development, I built a real-time server health monitoring dashboard using React, Node.js, and Socket.IO that tracks availability, latency, and system metrics across multiple endpoints. The system streams live data directly to the browser, giving operators immediate visibility into system status without manual polling.

I also developed a wireless vision-aid system that uses YOLOv8n object detection for real-time navigation assistance. This project involved optimizing computer vision models for edge devices, implementing low-latency streaming protocols, and delivering audio-based feedback. The system operates fully offline with hardware costs under $15.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and welcome the opportunity to discuss how my background in monitoring and inspection systems can contribute to your team.

Sincerely,

Md Shahanur Islam Shagor
