I am writing to express my interest in the Clinical Trial Associate position at Ollin Biosciences. Your work developing therapeutics for serious ophthalmic diseases, combined with a commitment to scientific rigor and transparency, is genuinely compelling.

While my professional background is in software engineering rather than clinical research, I bring transferable skills that directly support the operational needs of this role. In my experience as a web developer, I maintained detailed trackers, managed user access across multiple platforms, generated performance reports, and coordinated with vendors and internal teams. These responsibilities required the same accuracy, organization, and attention to detail that clinical trial operations demand.

I am comfortable working independently and collaboratively within small teams. I have worked remotely for several years and understand how to communicate clearly across different functions and time zones. I am also quick to learn new systems and tools, which will allow me to become productive with your study platforms and documentation processes from the start.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my organizational skills and operational experience can support your clinical operations team.

Sincerely,

Md Shahanur Islam Shagor
