I am writing to apply for the Test Job at Newcastle Digest. As a full-stack developer with experience across Laravel, Next.js, React, and Node.js, I build systems that are practical, maintainable, and user-focused.

Through my professional work, I have developed and deployed scalable web applications using Laravel for backend logic and Next.js for responsive, SEO-friendly frontends. I have integrated RESTful APIs, implemented role-based authentication, and optimized database performance through query tuning and caching strategies.

One area that particularly interests me is building real-world systems that work reliably under production conditions. I have experience deploying applications on Linux servers with Nginx, Docker, and CI/CD pipelines, and I am comfortable working across the full stack from database schema design to frontend component architecture.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my experience aligns with your needs.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
