I am writing to apply for the Product role at fashionxyz. With 4 years of full-stack development experience and a strong background in building scalable web applications, I am well positioned to contribute to your team.

My technical work centers on Laravel and Next.js for full-stack delivery, with additional depth in React, Node.js, TypeScript, and MySQL. I have built production systems that handle authentication, role-based access control, payment integration, real-time features, and database optimization. I focus on writing clean, maintainable code and delivering reliable applications.

One area that particularly interests me is building platforms that serve multiple user roles efficiently. In my previous work, I developed a multi-vendor e-commerce ecosystem using Laravel and Flutter, connecting customers, sellers, and logistics teams through a unified API layer. I also built a real-time server monitoring dashboard using Node.js, Socket.IO, and Docker that streams live system metrics to the browser.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. Thank you for considering my application.

Sincerely,

Md Shahanur Islam Shagor
