I am writing to apply for the Senior Software Engineer - Mobile position at 1KOMMA5°. Your mission to build the energy system of the future with Heartbeat AI and the Installation Manager app for field teams is exactly the kind of real-world, hardware-connected software challenge I want to work on.

I have built and shipped mobile applications using Flutter and React Native, and I have a strong foundation in cross-platform development. In my professional experience, I developed a multi-vendor e-commerce ecosystem that included multiple Flutter-based mobile apps for customers, sellers, and delivery agents, all connected to a Laravel backend. This required me to think about architecture, release quality, and long-term maintainability from the start.

One area that particularly interests me is the emphasis on automated testing and continuous delivery. I have implemented testing practices in my projects using tools like Jest and PHPUnit, and I have set up CI/CD pipelines for reliable deployments. I am comfortable debugging complex issues that arise when software interacts with hardware in the field, and I enjoy the process of turning user feedback into better product decisions.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my background in mobile and full-stack development can contribute to your team.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
