I am writing to apply for the Staff Backend Engineer (.NET) role at Apaleo. Your API-first property management platform and focus on AI-powered automation in hospitality is a compelling direction, and I am interested in contributing to scalable backend systems that drive real operational impact.

My backend engineering experience spans designing and building reliable APIs, working with PostgreSQL and MySQL, and deploying containerized services using Docker and Nginx on Linux servers. I have worked with cloud infrastructure on AWS, including EC2 and S3, and I am comfortable with CI/CD pipelines and maintaining production systems. While my primary stack has been Laravel and Node.js, I have foundational knowledge of C# and a strong grasp of distributed system principles, including event-driven communication and real-time data streaming with Socket.IO.

One area that particularly interests me is the intersection of AI and backend infrastructure. In previous projects, I integrated OpenAI and Replicate APIs into full-stack applications, built AI assistants trained on custom datasets, and implemented real-time monitoring dashboards that stream live system metrics. I regularly use AI-assisted development tools to accelerate debugging, generate boilerplate code, and improve documentation quality. I see AI not as a replacement for engineering judgment, but as a practical accelerator for building better systems faster.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in backend development, AI integration, and infrastructure can contribute to Apaleo’s engineering team.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
