I am writing to apply for the Senior Backend Engineer (.NET) role at Apaleo. Your focus on building an API-first, AI-powered property management platform that enables autonomous guest experiences is exactly the kind of backend challenge I want to work on.

My professional experience centers on designing and shipping production-grade APIs. I have built RESTful services with Laravel and Node.js, implemented authentication and authorization patterns, and worked with microservices architectures. I am comfortable owning the full API lifecycle from defining schemas and contracts to setting up monitoring and ensuring backward compatibility.

One area that particularly interests me is the intersection of backend engineering and AI. I have integrated LLM-powered features into applications, built APIs that connect to AI agents, and worked on systems that require real-time data processing and event-driven communication. This aligns directly with Apaleo's vision of enabling agentic booking and AI-native product capabilities.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my backend engineering experience can contribute to Apaleo's Storefront API and broader platform goals.

Sincerely,

Md Shahanur Islam Shagor
