I am writing to apply for the Senior Software Engineer (TypeScript, NestJS/Node.js) position at Atolls. Your work building a community-driven shopping platform that helps millions of consumers make smarter spending decisions is genuinely impressive. I would welcome the opportunity to contribute to your Fulfilment team.

My professional experience centers on backend development with Node.js, TypeScript, and related technologies. I have built and maintained RESTful APIs, worked with relational databases like MySQL and PostgreSQL, and deployed applications on AWS and Google Cloud. I am comfortable with microservice architectures and have used Docker and CI/CD pipelines in production environments.

One area that aligns well with this role is my work on the Travel Agency App, where I developed the full API using NestJS, TypeScript, MySQL, and TypeORM. I integrated third-party services, implemented secure authentication, and deployed the backend on AWS EC2. This project required the same kind of cross-team collaboration, API design, and attention to performance that the Senior Backend Engineer role demands.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the chance to discuss how my background can contribute to Atolls. Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
