I am writing to apply for the Freelance Content Creator role at Pickle. The opportunity to create learning and enablement content for enterprise audiences using AI tools aligns directly with how I work every day.

My approach to content creation is shaped by hands-on experience building AI-powered applications. I have worked extensively with OpenAI, Replicate, and other AI APIs to develop intelligent features for financial, real estate, and communication platforms. This means I do not just use AI tools as a black box. I understand how they generate outputs, where they need human validation, and how to refine their results for accuracy, tone, and brand alignment. I am comfortable using AI for research, outlining, drafting, and iteration while maintaining strict quality standards.

Translating complex technical information into clear, practical content is something I do regularly. In my work as a full-stack developer, I have written documentation, explained architectural decisions to non-technical stakeholders, and created user-facing materials that simplify sophisticated systems. I know how to take dense product or technical information and turn it into content that people can actually use and learn from.

I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am outcome-focused, detail-oriented, and comfortable working independently with minimal supervision. I have attached my CV for your review and welcome the opportunity to discuss how I can contribute to your team.

Sincerely,

Md Shahanur Islam Shagor
