I am writing to apply for the Referent COREP-Meldewesen position at coni+partner AG. While my professional background is in software engineering rather than banking regulation, I bring strong analytical capabilities, IT expertise, and a structured approach to data management that directly support the technical and reporting requirements of this role.

In my previous work as a Web Developer, I built and maintained full-stack applications where data accuracy, monitoring, and reporting were central. One project that closely relates to this position is my Real-Time Server Health Monitoring system. I developed a dashboard that tracks the availability, latency, and performance of multiple target URLs simultaneously, streaming live metrics to the browser using Socket.IO. This required continuous data quality monitoring, real-time analysis, and clear visualization of system status â skills that translate well to monitoring COREP data, analyzing risk metrics, and ensuring reporting accuracy.

I have strong experience working with databases including MySQL and PostgreSQL, building APIs, and developing tools that require precision and reliability. My work involved implementing role-based access control, authentication systems, and data validation pipelines. I am comfortable analyzing complex data sets, identifying anomalies, and building systems that maintain data integrity over time.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. Thank you for considering my application, and I look forward to the opportunity to discuss how my analytical and technical skills can contribute to your client’s regulatory reporting team.

Sincerely,

Md Shahanur Islam Shagor
