I am writing to apply for the Marine Interdiction Agent position with U.S. Customs and Border Protection. While my professional background is in software engineering, I bring strong analytical, technical, and problem-solving skills that are directly applicable to the duties of this role.

Through my work as a full-stack and AI engineer, I have developed expertise in monitoring systems, analyzing data patterns, and making real-time decisions based on complex information. I have built real-time server monitoring dashboards that track system health, availability, and latency, requiring constant attention to data streams and rapid response to anomalies. This experience translates well to interpreting radar data and monitoring vessel activities.

In previous projects, I have worked extensively with surveillance technologies, data collection, and analysis. I designed systems that process and evaluate real-time data streams, identify patterns, and trigger appropriate responses. These systems required the same attention to detail, accuracy, and procedural discipline that law enforcement operations demand.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and look forward to discussing how my skills can contribute to the mission of U.S. Customs and Border Protection.

Sincerely,

Md Shahanur Islam Shagor
