I am writing to apply for the Guide position at Mixed Media Labs, Inc. I understand that ECHEMI is a global B2B platform serving the chemical industry, connecting manufacturers and suppliers worldwide. Building and maintaining a platform that supports complex B2B operations requires reliable, scalable, and well-structured systems.

Through my professional experience as a full-stack developer, I have built and maintained production web applications using Laravel, Next.js, React, and Node.js. I have implemented authentication systems, role-based access control, RESTful APIs, payment gateways, and real-time features. I am comfortable working across the entire stack, from database design and API development to responsive frontend interfaces and deployment.

One area that particularly interests me is building systems that handle complex business logic while remaining maintainable and performant. In previous work, I optimized database queries, implemented caching strategies, and deployed applications on Linux servers using Docker, Nginx, and CI/CD pipelines. I have also integrated third-party services including payment gateways, cloud storage, and social logins.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background aligns with the needs of Mixed Media Labs, Inc.

Sincerely,

Md Shahanur Islam Shagor
