I am writing to express my interest in the Genealogista position at Amorim Global. Your company's mission to empower people and businesses across borders through strategic excellence and legal security is impressive, and I am drawn to the opportunity to contribute to high-quality genealogical research for European citizenship processes.

My background in software engineering has developed strong analytical and investigative skills that are directly transferable to genealogical research. I have extensive experience working with complex data systems, conducting thorough research across multiple databases, and validating information through careful cross-referencing. My work has consistently required formulating hypotheses, testing them systematically, and finding evidence even in scenarios with limited information.

One area that particularly interests me is the challenge of reconstructing family lineages from historical documents. In my technical work, I have developed systems that handle data integrity, authentication, and validation at scale. This experience has taught me to approach complex problems methodically, maintain meticulous attention to detail, and persist through difficult research challenges until reliable conclusions are reached.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my analytical capabilities and research experience can contribute to the excellence Amorim Global delivers to its clients.

Sincerely,

Md Shahanur Islam Shagor
