I am writing to apply for the Senior SEA Manager position at hurra.com. Your focus on combining deep performance marketing knowledge with AI, automation, and proprietary technology is exactly the kind of forward-thinking environment where I can contribute effectively.

My work has centered on building intelligent systems that automate complex workflows and extract actionable insights from data. I have developed AI-powered applications that integrate with APIs, process real-time data streams, and automate decision-making processes. This technical foundation gives me a practical understanding of how AI and automation can drive measurable performance improvements.

One area that particularly interests me is the challenge of identifying hidden levers for growth. In my projects, I have consistently focused on optimizing system performance by analyzing data patterns, testing hypotheses, and implementing targeted improvements. Whether it was tuning database queries for faster response times or building automated monitoring dashboards, I approach every problem with a focus on finding the most impactful solutions.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and look forward to the opportunity to discuss how my background in AI, automation, and data-driven development can contribute to hurra.com’s mission of shaping the next generation of paid search.

Sincerely,

Md Shahanur Islam Shagor
