I am writing to apply for the Digital Analytics & Tracking Consultant role at hurra.com. Your focus on GA4 tracking, Google Tag Manager, and server-side configurations for eCommerce clients aligns with my technical background in web development and cloud-based systems.

Through my professional experience as a Web Developer, I have built and maintained RESTful APIs, implemented authentication and role-based access control, and deployed applications on cloud platforms including Google Cloud. This work required a strong understanding of how data flows between client-side interfaces and server-side systems, which is directly relevant to implementing and optimizing server-side Google Tag Manager configurations.

One area that particularly interests me is the integration of analytics tools with eCommerce platforms. In previous projects, I have worked with payment gateways, user authentication flows, and real-time data synchronization, all of which involve careful event tracking and data layer management. My JavaScript skills, combined with experience in cloud deployment and monitoring, provide a solid foundation for supporting GA4 Enhanced E-commerce setups and Consent Management Platform integrations.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background can contribute to your team’s analytics and tracking work.

Sincerely,

Md Shahanur Islam Shagor
