I am writing to apply for the Stok role at the Office of Energy & Sustainability. Your focus on ESG consulting, carbon services, and sustainability consulting aligns with my interest in building technology that supports meaningful environmental impact.

My technical background is in full-stack web development, with professional experience building scalable applications using Laravel, Next.js, React, and Node.js. I have designed and integrated RESTful APIs, implemented authentication and role-based access control, and optimized database performance with MySQL and PostgreSQL. I also work comfortably with Docker, Linux servers, and CI/CD pipelines for deployment.

In my previous role as a Web Developer at Explo-IT, I delivered production applications end to end. This included building responsive, SEO-friendly interfaces with Next.js and Tailwind CSS, integrating real-time features using WebSockets, and implementing secure payment gateways. I also contributed to server maintenance and deployment on Nginx and Apache environments.

One project that reflects my approach is the Multivendor E-commerce Management Ecosystem, where I built a Laravel-based backend with role-based access control, Redis caching, and Firebase notifications, serving multiple Flutter mobile applications. This required coordinating complex data flows across different user roles while maintaining system reliability.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and welcome the opportunity to discuss how I can contribute to Stok’s mission.

Sincerely,

Md Shahanur Islam Shagor
