I am writing to apply for the Streaming Media Assistant position at The Walt Disney Company. The opportunity to support live and on-demand streaming operations for Disney's global content platforms is one I find genuinely compelling, particularly given my technical background and hands-on experience with system monitoring and real-time workflows.

Through my professional experience as a Web Developer, I have built and maintained production systems that required continuous health monitoring, incident response, and procedural documentation. I developed a real-time server health monitoring dashboard using Node.js, Express, Socket.IO, and React, which tracked availability and latency across multiple endpoints while streaming live metrics to the browser. This project required the same kind of attention to detail, troubleshooting discipline, and operational awareness that the Streaming Media Assistant role demands.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am available to work flexible hours, including nights, weekends, and holidays, and I am comfortable following defined operational procedures while raising awareness of issues as they arise. My background in digital media and online organizations, combined with my ability to learn quickly and adapt to new situations, positions me well to contribute to the Live Orchestration team.

I have attached my CV for your review and would welcome the opportunity to discuss how my skills align with the needs of your team.

Sincerely,

Md Shahanur Islam Shagor
