I am writing to apply for the IoT Specialist position at Jasper Solutions Inc. Your company's broad portfolio of cloud orchestration, infrastructure management, and secure system integration services for government and commercial clients is impressive. I am particularly interested in how your team approaches the intersection of connected systems, data protection, and operational reliability.

Through my professional experience and hands-on project development, I have built and maintained systems that require reliable communication between distributed components, real-time data processing, and secure deployment. I have worked extensively with Linux servers, Docker containers, Nginx, and cloud platforms including AWS and Google Cloud. These technologies form the foundation for managing IoT infrastructure where uptime, monitoring, and secure data flow are critical.

One relevant example is a Real-Time Server Health Monitoring dashboard I designed and developed. The system tracked the availability, latency, and performance of multiple target URLs simultaneously, streaming live metrics to the browser using Socket.IO. I containerized the entire stack with Docker and Docker Compose, deployed it behind Nginx, and implemented role-based access control with JWT authentication. This project required integrating Python and Flask for system metrics collection, Node.js for real-time communication, and React for the frontend interface.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in building reliable, monitored systems can contribute to Jasper Solutions' IoT initiatives.

Sincerely,

Md Shahanur Islam Shagor
