I am writing to apply for the People Operations Specialist role at VulnCheck. Your work in vulnerability intelligence is critical, and I respect the mission of helping security teams act with speed and confidence. I am drawn to the opportunity to bring operational rigor to a scaling global team.

Although my professional background is in software engineering, I have spent years building systems, documenting processes, and optimizing workflows in remote-first environments. I understand what it takes to create structure without slowing people down. I am comfortable working across time zones, managing multiple priorities, and handling sensitive information with discretion.

One area where I can contribute immediately is AI automation. I have practical experience integrating AI into real-world applications, including training custom assistants and automating data workflows. I see clear potential to apply that capability to streamline People Operations tasks such as feedback analysis, compliance tracking, and reporting.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the chance to discuss how my skills can support VulnCheck’s People team.

Sincerely,

Md Shahanur Islam Shagor
