I am writing to apply for the Maria Covlea position at Tyviso. With a background in full-stack development and a focus on building reliable, scalable web applications, I am confident I can contribute effectively to your team.

My technical experience centers on Laravel and Next.js, which I have used extensively to build production applications. I work with PHP, JavaScript, TypeScript, Tailwind CSS, and MySQL on a daily basis. I also have hands-on experience with RESTful API design, authentication systems, and database optimization.

In my professional experience as a Web Developer at Explo-IT, I designed and developed scalable web applications using Laravel on the backend and Next.js on the frontend. I built RESTful APIs, implemented role-based access control, integrated payment gateways, and optimized application performance through query tuning and caching strategies. I also deployed applications on Linux servers using Nginx and Docker with CI/CD pipelines.

One project that reflects my approach is the Multivendor E-commerce Management Ecosystem, a full-stack marketplace platform built with Laravel and MySQL. The system manages customers, sellers, delivery agents, and logistics teams through role-based access control and a centralized API layer. This project required careful database design, secure authentication, and real-time coordination between multiple user types.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my skills align with the needs at Tyviso.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
