I am writing to apply for the Jack Ward role at Tyviso. The position caught my attention because it requires a full-stack engineer capable of delivering production web applications with modern tools and clean architecture.

My professional experience centers on building scalable web systems using Laravel for backend logic and Next.js with React and TypeScript for the frontend. Over the past four years, I have designed RESTful APIs, implemented secure authentication and role-based access control, and integrated payment gateways. I also work with MySQL, PostgreSQL, and Redis for data management and caching.

In my most recent role at Explo-IT, I delivered features such as real-time chat and notifications using WebSockets, optimized database queries through Eloquent tuning and indexing, and deployed applications on Linux servers with Nginx and Docker. I also built responsive, SEO-friendly UIs with Tailwind CSS and modern JavaScript frameworks.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and welcome the opportunity to discuss how my skills can contribute to Tyviso.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
