I am writing to apply for the Customer Support Technician Helpdesk Offboardings & Access role at Pixel Machinery. Your focus on intelligently automated IT ecosystems that enhance security without compromising control resonates with how I approach systems work.

While my background is primarily in software engineering, I bring a detail-driven, process-oriented mindset that is directly relevant to owning the offboarding and access-deprovisioning lifecycle. Through my work building web applications with Laravel and Next.js, I have implemented authentication systems, role-based access control, and user management workflows. This experience has given me a practical understanding of why every access removal step matters and what happens when one is missed.

I am comfortable working at high volume and staying accurate under pressure. In previous development roles, I managed multiple concurrent tasks, followed checklists carefully, and documented my work so others could trust and build on it. I approach every task with the same precision whether it is de-provisioning a user account or optimizing a database query.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am early in my IT support career, technically curious, and eager to grow. I learn quickly and am ready to ramp up on tools like Jira Service Management, Okta, JumpCloud, and Google Workspace. I have attached my CV for your review and welcome the opportunity to discuss how I can contribute to your team.

Sincerely,

Md Shahanur Islam Shagor
