I am writing to apply for the User Researcher position at the Ministry of Housing, Communities and Local Government. The opportunity to contribute to the development of the Cyber Assessment Framework (CAF) for local government and help make public services more secure and user-centered aligns closely with my professional interests.

Through my work as a software engineer, I have developed strong skills in understanding user needs, analyzing complex problems, and delivering solutions that work for diverse groups of people. I have experience planning and conducting research activities, gathering insights from users, and translating those findings into actionable recommendations for product and service improvements.

One area that particularly interests me is the focus on inclusive research. In my previous roles, I have worked to ensure that the systems I built were accessible and usable by a wide range of users. I am comfortable adapting my approach to reach different user groups and ensuring that their voices are heard in the design process.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I look forward to the opportunity to discuss how my skills and experience can contribute to the important work being done by the Local Digital team at MHCLG.

Sincerely,

Md Shahanur Islam Shagor
