I am applying for the Funnel Builder position at DSIGNS AUSTRALIA. The role involves designing and building effective digital funnels, and I have direct experience developing full-stack web applications and automation systems that support similar conversion-oriented workflows.

Through my professional experience as a Web Developer, I have built and maintained scalable applications using Laravel, Next.js, React, and Node.js. I have implemented authentication systems, role-based access control, payment integrations, and real-time features. These skills translate directly to building and optimizing funnel systems that require reliable backend logic and clean user interfaces.

One area that particularly interests me is building systems that automate repetitive tasks and improve user experience. I have developed projects involving AI-powered assistants, real-time communication engines, and multi-vendor platforms. Each of these required careful planning, clean API design, and attention to how users interact with the system at every step.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background aligns with the needs of DSIGNS AUSTRALIA.

Sincerely,

Md Shahanur Islam Shagor
