I am writing to apply for the Steuerberater position in Cleebronn through Taxtalente.de. Although my professional background is in software engineering rather than tax advisory, I bring a strong orientation toward digital workflows, secure system architecture, and process automation that aligns well with a modern, digitally-driven tax firm.

Through my work as a full-stack and AI engineer, I have built scalable web applications using Laravel, Next.js, React, and Node.js. I have experience designing role-based access control, integrating payment gateways, and deploying applications on Linux servers with Docker and CI/CD pipelines. I am comfortable working with digital tools and automating repetitive tasks to improve efficiency.

One area that particularly interests me is the opportunity to contribute to a firm that values digital processes and modern infrastructure. I have hands-on experience with server monitoring, real-time data streaming, and secure API design, which I believe would be useful in a tax environment that relies on accurate data handling and client communication.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the chance to discuss how my technical skills and methodical approach could support your partner firm in Cleebronn.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
