I am writing to apply for the Steuerberater (m/w/d) position at Taxtalente.de for a partner firm in Wallmenroth. While my professional background is in software engineering rather than tax consulting, I bring a strong foundation in digital process optimization, secure system architecture, and data-driven problem solving that aligns with the firm's emphasis on modern, digital working methods.

Through my professional experience as a Web Developer, I have built and maintained scalable web applications using Laravel, Next.js, and MySQL. I have implemented authentication systems, role-based access control, and secure payment integrations. I also have hands-on experience deploying applications on Linux servers with Nginx, Docker, and CI/CD pipelines, ensuring reliable and secure production environments.

One area that particularly interests me is the opportunity to work in a digitally advanced firm that values efficiency and modern tools. I have experience integrating third-party services, optimizing database performance through query tuning and caching strategies, and building real-time features using WebSockets. These skills translate well into supporting digital workflows and process automation in a tax advisory context.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my technical background can contribute to the digital transformation goals of your partner firm in Wallmenroth.

Sincerely,

Md Shahanur Islam Shagor
