I am writing to apply for the Ut Facere Aut position at Innodrei. With a background in full-stack web development and AI engineering, I bring practical experience in building scalable applications, integrating third-party services, and delivering production-ready systems.

My technical foundation includes Laravel, Next.js, React, Node.js, and TypeScript, which I have used to develop complete web applications with authentication, payment gateways, real-time features, and role-based access control. I also work with MySQL, PostgreSQL, Redis, and Docker for database optimization and deployment.

In my professional experience as a Web Developer at Explo-IT, I designed and developed scalable web applications using Laravel and Next.js, built RESTful APIs, implemented secure authentication and payment systems, and optimized application performance through query tuning and caching. I also deployed applications on Linux servers with Nginx and Docker.

One project that reflects this work is the Multivendor E-commerce Management Ecosystem, where I built a Laravel backend with role-based access control, integrated Firebase notifications and Google Maps, and coordinated with Flutter mobile apps for a seamless multi-platform experience.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my skills align with the needs of your team.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
