I am writing to apply for the Venture Lending Associate position at Banco Covalto. This role requires a combination of analytical rigor, structured thinking, and the ability to manage complex financial workflows. While my professional background is in software engineering and AI, I have built systems that directly mirror the technical and analytical demands of this position.

One area that particularly interests me is the intersection of technology and finance. I have designed and developed an AI-powered financial application that processes user data, generates automated reports, and produces PDF term sheets. This project involved building secure APIs, integrating AWS services for authentication and document delivery, and training AI assistants to handle financial queries. The experience gave me hands-on exposure to data analysis, workflow automation, and structured reporting.

In previous work, I have built full-stack platforms that required rigorous testing, scenario planning, and performance optimization. For example, I developed a real-time server health monitoring dashboard that tracks system metrics, streams live data via Socket.IO, and supports role-based access control. This required careful architectural decisions, stress testing, and ongoing evaluation of system performance.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. Thank you for considering my application.

Sincerely,

Md Shahanur Islam Shagor
