I am writing to apply for the AI Product Engineer - Internal Tools & Automation role at Lyto Brands Group. The opportunity to build AI-powered internal tools that directly accelerate marketing, creative, and operations workflows is exactly the kind of work I want to do next.

Through my professional experience as a Web Developer, I have built and maintained production systems using PHP/Laravel, React, MySQL, and Docker. I have deployed applications on Linux servers with Nginx and Docker, and I am comfortable owning the full lifecycle from development to deployment. Your stack is familiar territory for me.

One area where I can contribute immediately is AI-powered automation. I have developed projects that integrate OpenAI APIs for intelligent assistants, built automated workflows for data processing, and implemented real-time features using WebSockets. I understand what it takes to move from an AI prototype to a production system that handles real traffic, latency, and error cases.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the chance to discuss how I can contribute to Lyto Brands Group.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
