I am writing to apply for the Senior Counsel Project Finance & Commercial position at Energy Vault. Your mission to build resilient, dispatchable energy infrastructure through an Independent Power Producer model is both ambitious and essential. I am drawn to the technical and operational complexity of financing large-scale renewable energy, battery storage, and data center projects.

My background is in software engineering and systems architecture, where I have spent over four years designing and delivering full-stack applications, real-time monitoring systems, and AI-powered platforms. This experience has sharpened my ability to break down complex problems, manage multiple workstreams simultaneously, and communicate clearly with cross-functional teams. I am accustomed to working under tight deadlines and maintaining attention to detail across concurrent projects.

One area that particularly interests me is the intersection of technology and finance. In my recent work, I built an AI-powered financial application that involved integrating payment gateways, generating PDF term sheets, and automating data workflows. This project required coordinating with stakeholders, managing API integrations, and ensuring data integrity throughout the process. I approach each task with a pragmatic mindset, focusing on practical outcomes rather than theoretical perfection.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. Thank you for considering my application.

Sincerely,

Md Shahanur Islam Shagor
