I am writing to apply for the Product Manager - Contact Center & Conversational AI position at tecRacer Germany GmbH. Your work as an AWS Premier Consulting Partner building contact center and AI solutions around Amazon Connect is directly relevant to my experience combining cloud infrastructure with intelligent systems.

My technical background is grounded in full-stack development with AWS services and AI integration. I have deployed applications on AWS EC2 and Amplify, integrated AWS SES for communication workflows, and built AI-powered assistants using OpenAI and Replicate API for financial and real estate platforms. This hands-on experience gives me a clear understanding of how cloud-native products are architected, deployed, and maintained.

What stands out to me about this role is the blend of strategic product development and direct customer engagement. In my previous work as a Web Developer, I regularly acted as the bridge between client requirements and technical delivery. I led requirement discussions, created proposals, and ensured that the final product aligned with business goals. I am comfortable identifying market opportunities and translating them into actionable product roadmaps.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in cloud-based product development and AI systems can contribute to tecRacer’s contact center portfolio.

Sincerely,

Md Shahanur Islam Shagor
