I am writing to apply for the Software Engineer (Angular / TypeScript / C++) position at K-tronik GmbH. Your work in the defense and aerospace sector, particularly on complex sensor systems and real-time data processing, aligns closely with the kind of technically demanding systems I enjoy building.

Through professional development work and hands-on projects, I have built a strong foundation in TypeScript and C++, combined with practical experience on Linux-based environments. I have developed frontend interfaces using modern web technologies and built backend components that handle real-time data streaming, API integration, and system-level communication. My work has consistently involved writing clean, maintainable code and applying SOLID design principles.

One area that particularly interests me is the integration of heterogeneous sensor systems and real-time data fusion. In previous work, I implemented communication solutions using REST APIs, WebSockets, and UDP streaming, and I have experience working with camera systems and sensor data pipelines. I am comfortable working across the full stack, from building responsive user interfaces to developing system-near components in C++.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my skills can contribute to your team at K-tronik.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
