I am writing to apply for the Lead Full Stack Developer position at Pertemps ERP. Your focus on designing modern cloud-native applications and guiding development teams aligns with my experience in building scalable full-stack systems and collaborating on technical decisions.

In my professional experience as a Web Developer, I have worked extensively with modern JavaScript frameworks including React, Next.js, and TypeScript for frontend development, and Node.js, Laravel, and Express.js for backend services. I have designed and implemented microservice architectures, containerized applications using Docker, and deployed them on cloud platforms such as AWS and Google Cloud. This background directly supports your requirement for strong JavaScript framework knowledge and cloud-native development.

A relevant example is a multi-vendor e-commerce ecosystem I built using Laravel and Flutter, where I designed the entire REST API layer, implemented role-based access control, integrated payment gateways, and deployed the system with Docker and Nginx on a cloud server. This project required coordinating between multiple frontend applications and a centralized backend, similar to the cross-team collaboration and architectural decisions this role demands.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my full-stack development experience can contribute to Pertemps ERP’s cloud-native projects.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
