I am writing to apply for the IT-System Engineer position at think about IT GmbH. Your focus on continuous process optimization and delivering excellent IT service through modern technology aligns with my own approach to building reliable and well-maintained systems.

My technical foundation includes Linux system administration, Docker containerization, and web server management with Nginx and Apache. I have hands-on experience deploying applications in production environments, setting up CI/CD pipelines, and monitoring server health to ensure stability and performance. I am comfortable working with cloud platforms such as AWS and Google Cloud, and I regularly use Git for version control and collaboration.

In previous work, I was responsible for deploying and maintaining web applications on Linux servers. This included configuring Nginx and Apache, managing Docker containers, setting up automated deployment pipelines, and performing proactive monitoring to catch issues before they affected users. I also handled system configuration adjustments and maintained documentation for deployed environments.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my experience can contribute to the thinkGROUP team.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
